En el segundo volumen, los autores continuan con la historia de diferentes areas de la medicina en Mexico como: la oncologia, la cirugia cardiovascular, general y reconstructiva; la ginecobstetricia, oftalmologia, ortopedia y urologia. Tambien se incluyen un estudio sobre la sociologia medica y salud publica, la lista de Sociedades y Asociaciones Medicas y una hemerografia de revistas medicas.

This is the most comprehensive volume dealing with tissue banking presently available, with 27 contributions from the most distinguished and experienced practitioners in the field: surgeons, microbiologists and tissue bankers. Safety of allografts is now a major concern due to possible microbial and viral contamination of tissues, even in the most sophisticated centres. Thus, publication here of the International Atomic Energy Agency's Code of Practice for the Radiation Sterilisation of Tissues is important, as is their guidance on Standards and Public Awareness regarding this often misunderstood technology. The volume spans all the methodologies used in the field and covers a spectrum of tissues: bone, skin, cardiovascular grafts, corneal grafts and sperm banking. Of particular interest in these days of gigantic disasters is the evaluation of the

value of an effective tissue bank during the Volendam burns disaster in the Netherlands and the horrific disaster in OC Messa RedondaOCO Peru.

Orthopaedics, as usual, has the premier usage of tissues and this volume is graced by a landmark contribution from that doyen of massive allograft surgery, Henry Mankin. Balancing out the US experience is a contribution from Russia, which outlines new approaches to using allograft and autograft bone. The motivation for such a comprehensive volume came at the congress held in Boston, which drew together all the international associations of tissue banking: American, Asia-Pacific, Latin American and European. The whole world has been harnessed to construct this outstanding and historic volume. Sample Chapter(s). Chapter 1: The International Atomic Energy Agency (IAEA) Programme in Radiation and Tissue Banking: Past and Present (93 KB).

Contents: The Contribution of the International Atomic Energy Agency (IAEA) to Tissue Banking; Safety of Tissue Allografts; Ethical and Social Aspects of Tissue Banking; Tissue Grafts in Orthopaedics; Caradiovascular Grafts; Cornea Grafts; Sperm Banking; Cryopreservation. Readership: Tissue bank operators, orthopaedic surgeons, radiation biologists and government agency policy-makers."

La propedeútica es una enseñanza previa que sirve de preparación para comenzar el estudio o aprendizaje de algo. Por lo tanto, la propedeútica quirúrgica debe aportar los conocimientos preparatorios para el estudio de nuestra Ciencia, la

Cirugía. El nuevo Plan de Estudios de Medicina ha introducido una asignatura que se denomina "Fisiopatología y Propedeútica Quirúrgica", y por esta razón este libro pretende complementar al ya publicado en Fisiopatología Quirúrgica y constituir entre ambos los libros de texto de la citada asignatura. La Propedeútica Quirúrgica debe ser una asignatura cuyos conocimientos tengan aplicación eminentemente práctica y deseamos que este libro sirva de guía para conseguir dicho objetivo.

Traumatología facial La segunda edición del Tratado de Otorrinolaringología y Cirugía de Cabeza y Cuello ha contado con la participación de destacados profesionales a escala internacional. Incluye capítulos que no figuraban en la edición precedente, principalmente, por no disponer en ese momento de un corpus doctrinal tan desarrollado como en la actualidad. Este es el caso de los estudios de calidad de vida, las dianas terapéuticas moleculares, la metodología de los ensayos clínicos, las consideraciones terapéuticas en los pacientes geriátricos, los cuidados paliativos, la cirugía guiada por la imagen, la cirugía robótica, la telemedicina, la
