The Modern Library Writer's Workshop

Can refocusing conversations between doctors and their patients lead to better health? Despite modern medicine's infatuation with high-tech gadgetry, the single most powerful diagnostic tool is the doctor-patient conversation, which can uncover the lion's share of illnesses. However, what patients say and what doctors hear are often two vastly different things. Patients, anxious to convey their

symptoms, feel an urgency to “make their case” to their doctors. Doctors, under pressure to be efficient, multitask while patients speak and often miss the key elements. Add in stereotypes, unconscious bias, conflicting agendas, and fear of lawsuits and the risk of misdiagnosis and medical errors multiplies dangerously. Though the gulf between what patients say and what doctors hear is often wide, Dr. Danielle Ofri proves that it doesn’t have to be. Through the powerfully resonant human stories that Dr. Ofri’s writing is renowned for, she explores the high-stakes world of doctor-patient communication that we all must navigate. Reporting on the latest research studies and interviewing scholars, doctors, and patients, Dr. Ofri reveals how better communication can lead to better health for all of us.

The Inflamed Mind

Longlisted for the Wellcome Book Prize 2019 Arnold Thomas Fanning had his first experience of depression during adolescence, following the death of his mother. Some ten years later, an up-and-coming playwright, he was overcome by mania and delusions. Thus began a terrible period in which he was often suicidal, increasingly disconnected from family and friends, sometimes in trouble with the law, and homeless in London. Drawing on his own memories, the recollections of people who knew him when he was at his worst, and medical and police records, Arnold Thomas Fanning has produced a beautifully written, devastatingly intense account of madness - and recovery, to the point where he has not had any serious

illness for over a decade and has become an acclaimed playwright. In a remarkably vivid present-tense narrative, Fanning manages to convey the consciousness of a person living with mania, psychosis and severe depression. Very few people have gone through what Arnold Thomas Fanning went through and emerged alive, well, and capable of telling the tale with such skill and insight. *Mind on Fire* is a book anyone who has experienced mental illness, or is close to someone who is mentally ill, or who wishes to understand the workings of the disordered mind. 'Mind on Fire is a truly powerful, arresting, haunting account. Arnold Thomas Fanning has reckoned with the darkest matter of his heart and mind, and I challenge anyone not to be moved by that.' Sara Baume, author of *Spill Simmer Falter Wither and A Line Made by Walking* 'In this strange and singular book, Arnold Thomas Fanning mercilessly excavates the infernal underworld of his own years of madness. As reminiscent as it occasionally is of John Healy's *The Grass Arena*, and even of Orwell's *Down and Out in Paris and London*, the book is ultimately not quite like anything else I've read, and brought me as close to the lived reality of mental illness as I have ever been. It's a significant achievement: a painful, inexorable work of autobiography, whose existence is its own form of redemption.' Mark O'Connell, Baillie Gifford Prize-shortlisted author of *To Be a Machine* '[A] painfully intense, courageous and gripping account of [Fanning's] journey to the underworld of madness and back. This is a brave and instructive book.' Irish Times 'This is an extraordinary memoir about how it feels to be depressed, delusional, desperate' The Observer 'A ratcheting pace, a tight first-person immediacy, and utterly

staggering to be a passenger over its entire warped course An indelible, ground-shaking account' Hilary A White, Irish Independent, Memoir of the Year, Best Reads of 2018 'A spellbinding memoir that should prove both moving and hopefully cathartic for the reader.' RTE Culture 'Told in tight and immediate first-person, and imbued with a startling momentum that ratchets unnervingly, Fanning's publishing debut is a significant achievement and should be a talking point in publishing this year.' Irish Independent 'Extraordinary. An account of mental illness, grief, delusions, homelessness, a fractured family relationship and all while trying to recover and create. Superb writing on a frequently difficult subject.' Sinéad Gleeson 'Incredibly important' Emilie Pine, author of Notes to Self 'Fanning's debut book lays it on the line in a deeply personal and compelling chronicle of his descent into depression and his way back out.' RTE Guide 'Wonderful' Joseph O'Connor, Irish Times Books of the Year 'Unsparingly direct, searing and honest It is gripping to read and must have been exhausting to live' Medical Independent 'One of the most gripping and revealing memoirs I've read in a long time. A controlled and artful exploration of absolute loss of control, an unsettling and at times very moving reconstruction of a period of serious mental illness, Mind on Fire is a beautiful book about a terrifying thing.' Mark O'Connell, Irish Times Books of the Year 'Gripping' Sinéad Gleeson, Irish Times Books of the Year 'Shocking' Liz Nugent, Irish Times Books of the Year 'Poignant, beautifully detailed memoir' Sarah Gilmartin, Irish Times, Best debuts of 2018 'Brave and illuminating' Sunday Business Post 'This is the type of account that not only grips you wholesale as the

pages flitter past, it also changes your very perception of psychology' Hilary A White, Sunday Independent Memoir of the Year

Pure Murder

Inflammation is the body's natural response to injury or illness, but long-term inflammation can silently turn on us, becoming a danger to our health. This guide explains how chronic inflammation damages cells and can lead to asthma, cancer, diabetes, heart disease, rheumatoid arthritis, and even Alzheimer's disease. Fortunately, there are natural solutions to keep chronic inflammation in check. Our food choices can make a crucial difference. Learn how to design an anti-inflammatory diet based on health-protective plant-based foods with high concentrations of phytochemicals and other essential inflammation-fighting nutrients. Then enjoy a few delicious, easy-to-prepare recipes that reveal how to incorporate a wide variety of these power-packed foods into everyday dishes.

The Memory Palace

Maybe You Should Talk to Someone

This is Leonard Pitt's story of growing up the misfit in Detroit in the 1940s and 50s. In a later age he would have been put on Ritalin and paraded before psychiatrists because he couldn't pay attention in school. In 1962, at the end of a misguided foray towards a career in advertising he took the ultimate cure, a trip to Paris. He thought it would only be a visit. He stayed seven years. There in the City of Light, Leonard's mind exploded. And it hasn't stopped since. Studying mime with master Etienne Decroux and living in Paris were the university he never knew. This inspiration unleashed a voracious appetite to understand the "why" of things. He asked a simple question, "Why did the ballet go up?" While building a theatre career performing and teaching, he embarked on a quest to study the origins of the ballet, the history of early American popular music, the pre-Socratic philosophers, early modern science, the European witch hunt, the history of Paris, and more. To his unschooled mind it all fits together. Who would see a historical arc between Louis XIV and Elvis Presley? Leonard does. And he'll tell you about it.

The Sound of Gravel

The courageous memoir of a woman who was robbed of all her memories by a traumatic brain injury—and her more than twenty-five-year struggle to reclaim her life: "[A tale] of triumph in the search for identity" (The New York Times Book Review). In 1988, Su Meck was twenty-two and married with two children when a ceiling fan fell and struck her on the head, erasing all her memories of her life.

Although her body healed rapidly, her memories never returned. After just three weeks in the hospital, her physicians released Su and she returned home to take care of her two toddlers. What would you do if you lost your past? Adrift in a world about which she understood almost nothing, Su became an adept mimic, gradually creating routines and rituals that sheltered her and her family from the near-daily threat of disaster—or so she thought. Though Su would eventually relearn to tie her shoes, cook a meal, read, and write, nearly twenty years would pass before a series of personally devastating events shattered the “normal” life she had worked so hard to build, and she realized that she would have to grow up all over again. In her own indelible voice, Su offers a unique view from the inside of a terrible injury as she “recounts her grueling climb back to normalcy...in this heart-wrenching true story” (O, The Oprah Magazine). Piercing, heartbreaking, but finally uplifting, *I Forgot to Remember* is the story of a woman determined to live life on her own terms.

Brain on Fire

The motivation to experience pleasure instead of pain unites us all, despite the immense diversity in our thoughts and behaviors. However, the perception of pain is easier than the fleeting feeling of happiness and paradoxically, an obsessive desire for pleasure or an inability to endure pain are conducive to pain, not pleasure. The emotions of pain and pleasure are persuasive and mesmerizing but

can also be convoluted and deceptive, and the absence of pain is not enough for happiness. Suffering because of disease, disability, or difficulty is natural, but suffering can subtly interfere with our serenity, and some helplessly abuse substances and other things for happiness. The human brain is marvelous, but there is something suspicious about its practical utility for a flourishing life, and its imperfect intelligence can make us suffer, even when there is no internal or external reason for the pain. Pain cannot be erased from life, but cognitive fitness can alleviate it and allow us to use it, as well as illusive intellect, to our advantage. Cognitive fitness advances cognitive competence and resilience for success; suggests strategies to manage stress, anxiety, disorders, failures and complexity; provides a pragmatic answer to nihilism; and helps to keep the hedonic gauge on the continuum of pain and pleasure as close to pleasure as possible.

Discovering the Brain

A riveting first-hand account of a physician who's suddenly a dying patient, In Shock "searches for a glimmer of hope in life's darkest moments, and finds it."
—The Washington Post Dr. Rana Awdish never imagined that an emergency trip to the hospital would result in hemorrhaging nearly all of her blood volume and losing her unborn first child. But after her first visit, Dr. Awdish spent months fighting for her life, enduring consecutive major surgeries and experiencing multiple overlapping organ failures. At each step of the recovery process, Awdish was faced

with something even more unexpected: repeated cavalier behavior from her fellow physicians—indifference following human loss, disregard for anguish and suffering, and an exacting emotional distance. Hauntingly perceptive and beautifully written, *In Shock* allows the reader to transform alongside Awdish and watch what she discovers in our carefully-cultivated, yet often misguided, standard of care. Awdish comes to understand the fatal flaws in her profession and in her own past actions as a physician while achieving, through unflinching presence, a crystalline vision of a new and better possibility for us all. As Dr. Awdish finds herself up against the same self-protective partitions she was trained to construct as a medical student and physician, she artfully illuminates the dysfunction of disconnection. Shatteringly personal, and yet wholly universal, she offers a brave road map for anyone navigating illness while presenting physicians with a new paradigm and rationale for embracing the emotional bond between doctor and patient.

Monkey Mind

The daughter of piano prodigy Norma Herr describes how she and her sister were forced by their mother's violent schizophrenic episodes to discontinue contact with her until the author's debilitating injury changed her sense of the world and enabled a healing reconciliation.

A Wrinkle in Time

At 8,000 miles away from home, a business professional delivers a polished presentation to a group of executives. And within two hours, she forgets how to walk. Talking becomes too strenuous. She is struck by an odd series of neurological deficits that baffle her and a dozen doctors for 27 months. Brain Wreck is a must read for anyone who has witnessed the frustration of a mysterious illness. This is a story of determination and an unrelenting journey to save one's mind. With humor and unabashed honesty, the author restores a shattered spirit while striving to be "normal."

Brain on Fire

INSTANT NEW YORK TIMES BESTSELLER An Amazon "Best Book of 2019" A Washington Post "10 Books To Read in July" A Los Angeles Times "Seven Highly Anticipated Books for Summer Reading" A USA Today "20 of the Season's Hottest New Books" A New York Post "25 Best Beach Reads of 2019 You Need to Pre-Order Now" A Bustle "The Best New True Crime Books You Can Read Right Now" "Maureen Callahan's deft reporting and stylish writing have created one of the all-time-great serial-killer books: sensitive, chilling, and completely impossible to put down." --Ada Calhoun, author of St. Marks Is Dead Ted Bundy. John Wayne Gacy.

Jeffrey Dahmer. The names of notorious serial killers are usually well-known; they echo in the news and in public consciousness. But most people have never heard of Israel Keyes, one of the most ambitious and terrifying serial killers in modern history. The FBI considered his behavior unprecedented. Described by a prosecutor as "a force of pure evil," Keyes was a predator who struck all over the United States. He buried "kill kits"--cash, weapons, and body-disposal tools--in remote locations across the country. Over the course of fourteen years, Keyes would fly to a city, rent a car, and drive thousands of miles in order to use his kits. He would break into a stranger's house, abduct his victims in broad daylight, and kill and dispose of them in mere hours. And then he would return home to Alaska, resuming life as a quiet, reliable construction worker devoted to his only daughter. When journalist Maureen Callahan first heard about Israel Keyes in 2012, she was captivated by how a killer of this magnitude could go undetected by law enforcement for over a decade. And so began a project that consumed her for the next several years--uncovering the true story behind how the FBI ultimately caught Israel Keyes, and trying to understand what it means for a killer like Keyes to exist. A killer who left a path of monstrous, randomly committed crimes in his wake--many of which remain unsolved to this day. *American Predator* is the ambitious culmination of years of interviews with key figures in law enforcement and in Keyes's life, and research uncovered from classified FBI files. Callahan takes us on a journey into the chilling, nightmarish mind of a relentless killer, and to the limitations of traditional law enforcement.

Brain Wreck

As seen on "CBS This Morning" Worldwide, depression will be the single biggest cause of disability in the next twenty years. But treatment for it has not changed much in the last three decades. In the world of psychiatry, time has apparently stood still until now with Edward Bullmore's *The Inflamed Mind: A Radical New Approach to Depression*. A Sunday Times (London) Top Ten Bestseller In this game-changing book, University of Cambridge professor of psychiatry Edward Bullmore reveals the breakthrough new science on the link between depression and inflammation of the body and brain. He explains how and why we now know that mental disorders can have their root cause in the immune system, and outlines a future revolution in which treatments could be specifically targeted to break the vicious cycles of stress, inflammation, and depression. *The Inflamed Mind* goes far beyond the clinic and the lab, representing a whole new way of looking at how mind, brain, and body all work together in a sometimes misguided effort to help us survive in a hostile world. It offers insights into how we could start getting to grips with depression and other mental disorders much more effectively in the future.

The House Girl

Falling Into the Fire is psychiatrist Christine Montross's thoughtful investigation of the gripping patient encounters that have challenged and deepened her practice. The majority of the patients Montross treats in Falling Into the Fire are seen in the locked inpatient wards of a psychiatric hospital; all are in moments of profound crisis. We meet a young woman who habitually commits self-injury, having ingested light bulbs, a box of nails, and a steak knife, among other objects. Her repeated visits to the hospital incite the frustration of the staff, leading Montross to examine how emotion can interfere with proper care. A recent college graduate,

dressed in a tunic and declaring that love emanates from everything around him, is brought to the ER by his concerned girlfriend. Is it ecstasy or psychosis? What legal ability do doctors have to hospitalize—and sometimes medicate—a patient against his will? A new mother is admitted with incessant visions of harming her child. Is she psychotic and a danger or does she suffer from obsessive thoughts? Her course of treatment—and her child's future—depends upon whether she receives the correct diagnosis. Each case study presents its own line of inquiry, leading Montross to seek relevant psychiatric knowledge from diverse sources. A doctor of uncommon curiosity and compassion, Montross discovers lessons in medieval dancing plagues, in leading forensic and neurological research, and in moments from her own life. Beautifully written, deeply felt, *Falling Into the Fire* brings us inside the doctor's mind, illuminating the grave human costs of mental illness as well as the challenges of diagnosis and treatment. Throughout, Montross confronts the larger question of psychiatry: What is to be done when a patient's experiences cannot be accounted for, or helped, by what contemporary medicine knows about the brain? When all else fails, Montross finds, what remains is the capacity to abide, to sit with the desperate in their darkest moments. At once rigorous and meditative, *Falling Into the Fire* is an intimate portrait of psychiatry, allowing the reader to witness the humanity of the practice and the enduring mysteries of the mind

What Patients Say, What Doctors Hear

INSTANT NEW YORK TIMES BESTSELLER! Now being developed as a television series with Eva Longoria and ABC! “Rarely have I read a book that challenged me to see myself in an entirely new light, and was at the same time laugh-out-loud funny and utterly absorbing.”—Katie Couric “This is a daring, delightful, and transformative book.”—Arianna Huffington, Founder, Huffington Post and Founder & CEO, Thrive Global “Wise, warm, smart, and funny. You must read this book.”—Susan Cain, New York Times best-selling author of *Quiet* From a New York Times best-selling author, psychotherapist, and national advice columnist, a hilarious, thought-provoking, and surprising new book that takes us behind the scenes of a therapist’s world—where her patients are looking for answers (and so is she). One day, Lori Gottlieb is a therapist who helps patients in her Los Angeles practice. The next, a crisis causes her world to come crashing down. Enter Wendell, the quirky but seasoned therapist in whose office she suddenly lands. With his balding head, cardigan, and khakis, he seems to have come straight from Therapist Central Casting. Yet he will turn out to be anything but. As Gottlieb explores the inner chambers of her patients’ lives — a self-absorbed Hollywood producer, a young newlywed diagnosed with a terminal illness, a senior citizen threatening to end her life on her birthday if nothing gets better, and a twenty-something who can’t stop hooking up with the wrong guys — she finds that the questions they are struggling with are the very ones she is now bringing to Wendell. With startling wisdom and humor, Gottlieb invites us into her world as

both clinician and patient, examining the truths and fictions we tell ourselves and others as we teeter on the tightrope between love and desire, meaning and mortality, guilt and redemption, terror and courage, hope and change. *Maybe You Should Talk to Someone* is revolutionary in its candor, offering a deeply personal yet universal tour of our hearts and minds and providing the rarest of gifts: a boldly revealing portrait of what it means to be human, and a disarmingly funny and illuminating account of our own mysterious lives and our power to transform them.

Brain On Fire: My Month of Madness

British scientist James Smithson left a fortune to the country he so admired but had never visited. His gift founded the Smithsonian Institution and built the Smithsonian Castle. Today, the castle's distinct Romanesque facade glows warmly against the cool marble that dominates the National Mall. Yet the story of the stones is just as remarkable as that of the building that they grace. It was a boom-bust ride for the Seneca Quarry--the source of the red sandstone. The quarry saw its first developer die, filed for bankruptcy twice, suffered through floods and contributed to a national scandal that embarrassed the Grant presidency and helped bring down the Freedman's Bank. This is the untold history of the quarry owners and emancipated slaves who toiled there and the many people who work to this day to save Seneca. Join author Garrett Peck as he traces the unlikely story of the Smithsonian Castle and the Seneca Quarry.

Cognitive Fitness

Written by the leading researchers in the field, this information-rich guide to improving your mood explains how gut health drives psychological well-being, and how depression and anxiety can be relieved by adjusting your intestinal bacteria. This groundbreaking book explains the revolutionary new science of psychobiotics and the discovery that your brain health and state of mind are intimately connected to your microbiome, that four-pound population of microbes living inside your intestines. Leading medical researchers John F. Cryan and Ted Dinan, working with veteran journalist Scott C. Anderson, explain how common mental health problems, particularly depression and anxiety, can be improved by caring for the intestinal microbiome. Science is proving that a healthy gut means a healthy mind—and this book details the steps you can take to change your mood and improve your life by nurturing your microbiome.

American Predator

Ultrasound for the Win! Emergency Medicine Cases, Volume 1 is an educational series based on real Emergency Department cases where point-of-care ultrasound aided in the diagnosis or changed the management of a patient's care! This collection of real jaw-dropping cases is geared towards anyone interested in

learning more about point-of-care ultrasound! The cases included highlight several interesting and often surprising findings seen on point-of-care ultrasound that may have otherwise been missed! These exciting cases are expert peer-reviewed by Physician Leaders in the field of Point-of-Care Ultrasound including Dr. Chris Moore, Dr. Mike Mallin, Dr. Resa Lewiss, Dr. Mike Stone, and many more!

Brain on Fire

A stunning New York Times bestselling novel that intertwines the stories of an escaped slave in 1852 Virginia and an ambitious young lawyer in contemporary New York and asks: is it ever too late to right a wrong? Lynnhurst, Virginia, 1852. Seventeen-year-old Josephine Bell decides to run away from the failing tobacco farm where she is a slave and nurse to her ailing mistress, the aspiring artist Lu Anne Bell. New York City, 2004. Lina Sparrow, an ambitious first-year associate in an elite law firm, is given a difficult, highly sensitive assignment that could make her career: finding the “perfect plaintiff” to lead a historic class-action lawsuit worth trillions of dollars in reparations for descendants of American slaves. It is through her father, the renowned artist Oscar Sparrow, that Lina discovers Josephine Bell and a controversy rocking the art world: are the iconic paintings long ascribed to Lu Anne Bell really the work of her house slave, Josephine? A descendant of Josephine’s—if Lina can locate one—would be the perfect face for the reparations lawsuit. While following the runaway house girl’s faint trail through

old letters and plantation records, Lina finds herself questioning her own family history and the secrets that her father has never revealed: how did Lina's mother die? And why will he never speak about her?

Life After Encephalitis

I was dead for thirty seconds. That's what the cop in Fall River told me. When the EMTs found me, there was a needle in my arm and a packet of heroin in the front seat. At basketball-crazy Durfee High School in Fall River, Massachusetts, junior guard Chris Herren carried his family's and the city's dreams on his skinny frame. His grandfather, father, and older brother had created their own sports legends in a declining city; he was the last, best hope for a career beyond the shuttered mills and factories. Herren was heavily recruited by major universities, chosen as a McDonald's All-American, featured in a Sports Illustrated cover story, and at just seventeen years old became the central figure in *Fall River Dreams*, an acclaimed book about the 1994 Durfee team's quest for the state championship. Leaving Fall River for college, Herren starred on Jerry Tarkanian's Fresno State Bulldogs team of talented misfits, which included future NBA players as well as future convicted felons. His gritty, tattooed, hip-hop persona drew the ire of rival fans and more national attention: Rolling Stone profiled him, 60 Minutes interviewed him, and the Denver Nuggets drafted him. When the Boston Celtics acquired his contract, he lived the dream of every Massachusetts kid—but off the court Herren was secretly

crumbling, as his alcohol and drug use escalated and his life spiraled out of control. Twenty years later, Chris Herren was married to his high-school sweetheart, the father of three young children, and a heroin junkie. His basketball career was over, consumed by addictions; he had no job, no skills, and was a sadly familiar figure to those in Fall River who remembered him as a boy, now prowling the streets he once ruled, looking for a fix. One day, for a time he cannot remember, he would die. In his own words, Chris Herren tells how he nearly lost everything and everyone he loved, and how he found a way back to life. Powerful, honest, and dramatic, *Basketball Junkie* is a remarkable memoir, harrowing in its descent, and heartening in its return.

Encyclopaedia Britannica

Describes the brutal 1993 torture, rape, and murder of Jennifer Ertman and Elizabeth Pena, two innocent teenagers, whose bodies were discovered in a Houston park, and the gang of six young men who were arrested, tried, and convicted of the crime. Original.

Brains on Fire

A boy and his favorite stuffed animals share their days with one another in this

cozy bedtime picture book with audio from Mem Fox. There was once a boy who loved bedtime. What could be more wonderful than sharing bedtime with beloved friends? The little boy in this gentle and fun story loves to talk to his stuffed animals each evening and share with them all the things that happened to him that day—and to hear about their days, too. From bestselling author Mem Fox and award-winning illustrator Lauren Stinger, here is a celebration of imagination, play, friendship, and coziness certain to touch a chord with young children everywhere. Includes audio!

I Forgot to Remember

An account of the author's struggle with a rare brain-attacking autoimmune disease traces how she woke up in a hospital room with no memory of baffling psychotic symptoms, describing the last-minute intervention by a doctor who identified the source of her illness.

The Smithsonian Castle and The Seneca Quarry

The New York Times bestseller now in paperback with a new epilogue. In March 1836, the Mexican army led by General Santa Anna massacred more than two hundred Texians who had been trapped in the Alamo. After thirteen days of

fighting, American legends Jim Bowie and Davey Crockett died there, along with other Americans who had moved to Texas looking for a fresh start. It was a crushing blow to Texas's fight for freedom. But the story doesn't end there. The defeat galvanized the Texian settlers, and under General Sam Houston's leadership they rallied. Six weeks after the Alamo, Houston and his band of settlers defeated Santa Anna's army in a shocking victory, winning the independence for which so many had died. Sam Houston and the Alamo Avengers recaptures this pivotal war that changed America forever, and sheds light on the tightrope all war heroes walk between courage and calculation. Thanks to Kilmeade's storytelling, a new generation of readers will remember the Alamo--and recognize the lesser known heroes who snatched victory from the jaws of defeat.

Body on Fire

A Wrinkle in Time is the winner of the 1963 Newbery Medal. It was a dark and stormy night—Meg Murry, her small brother Charles Wallace, and her mother had come down to the kitchen for a midnight snack when they were upset by the arrival of a most disturbing stranger. "Wild nights are my glory," the unearthly stranger told them. "I just got caught in a downdraft and blown off course. Let me sit down for a moment, and then I'll be on my way. Speaking of ways, by the way, there is such a thing as a tesseract." A tesseract (in case the reader doesn't know) is a wrinkle in time. To tell more would rob the reader of the enjoyment of Miss

L'Engle's unusual book. *A Wrinkle in Time*, winner of the Newbery Medal in 1963, is the story of the adventures in space and time of Meg, Charles Wallace, and Calvin O'Keefe (athlete, student, and one of the most popular boys in high school). They are in search of Meg's father, a scientist who disappeared while engaged in secret work for the government on the tesseract problem.

Body of Work

"One of America's most courageous young journalists" and the author of the #1 New York Times bestselling memoir *Brain on Fire* investigates the shocking mystery behind the dramatic experiment that revolutionized modern medicine (NPR). Doctors have struggled for centuries to define insanity--how do you diagnose it, how do you treat it, how do you even know what it is? In search of an answer, in the 1970s a Stanford psychologist named David Rosenhan and seven other people--sane, healthy, well-adjusted members of society--went undercover into asylums around America to test the legitimacy of psychiatry's labels. Forced to remain inside until they'd "proven" themselves sane, all eight emerged with alarming diagnoses and even more troubling stories of their treatment. Rosenhan's watershed study broke open the field of psychiatry, closing down institutions and changing mental health diagnosis forever. But, as Cahalan's explosive new research shows in this real-life detective story, very little in this saga is exactly as it seems. What really happened behind those closed asylum doors?

The Great Pretender

The brain There is no other part of the human anatomy that is so intriguing. How does it develop and function and why does it sometimes, tragically, degenerate? The answers are complex. In *Discovering the Brain*, science writer Sandra Ackerman cuts through the complexity to bring this vital topic to the public. The 1990s were declared the "Decade of the Brain" by former President Bush, and the neuroscience community responded with a host of new investigations and conferences. *Discovering the Brain* is based on the Institute of Medicine conference, *Decade of the Brain: Frontiers in Neuroscience and Brain Research*. *Discovering the Brain* is a "field guide" to the brain--an easy-to-read discussion of the brain's physical structure and where functions such as language and music appreciation lie. Ackerman examines How electrical and chemical signals are conveyed in the brain. The mechanisms by which we see, hear, think, and pay attention--and how a "gut feeling" actually originates in the brain. Learning and memory retention, including parallels to computer memory and what they might tell us about our own mental capacity. Development of the brain throughout the life span, with a look at the aging brain. Ackerman provides an enlightening chapter on the connection between the brain's physical condition and various mental disorders and notes what progress can realistically be made toward the prevention and treatment of stroke and other ailments. Finally, she explores the potential for major advances during the "Decade of the Brain," with a look at

medical imaging techniques--what various technologies can and cannot tell us--and how the public and private sectors can contribute to continued advances in neuroscience. This highly readable volume will provide the public and policymakers--and many scientists as well--with a helpful guide to understanding the many discoveries that are sure to be announced throughout the "Decade of the Brain."

Mind on Fire

Discusses the concept of neural networks, examines their similarity to the human mind, and looks at current research

Apprentices of Wonder

Longlisted for the Wellcome Book Prize 2019 Arnold Thomas Fanning had his first experience of depression during adolescence, following the death of his mother. Some ten years later, an up-and-coming playwright, he was overcome by mania and delusions. Thus began a terrible period in which he was often suicidal, increasingly disconnected from family and friends, sometimes in trouble with the law, and homeless in London. Drawing on his own memories, the recollections of people who knew him when he was at his worst, and medical and police records,

Arnold Thomas Fanning has produced a beautifully written, devastatingly intense account of madness - and recovery, to the point where he has not had any serious illness for over a decade and has become an acclaimed playwright. Fanning conveys the consciousness of a person living with mania, psychosis and severe depression with a startling precision and intimacy. *Mind on Fire* is the gripping, sometimes harrowing, and ultimately uplifting testament of a person who has visited hellish regions of the mind. "Mind on Fire is a truly powerful, arresting, haunting account. Arnold Thomas Fanning has reckoned with the darkest matter of his heart and mind, and I challenge anyone not to be moved by that." Sara Baume, author of *Spill Simmer Falter Wither* and *A Line Made by Walking* "In this strange and singular book, Arnold Thomas Fanning mercilessly excavates the infernal underworld of his own years of madness. As reminiscent as it occasionally is of John Healy's *The Grass Arena*, and even of Orwell's *Down and Out in Paris and London*, the book is ultimately not quite like anything else I've read, and brought me as close to the lived reality of mental illness as I have ever been. It's a significant achievement: a painful, inexorable work of autobiography, whose existence is its own form of redemption." Mark O'Connell, Baillie Gifford Prize-shortlisted author of *To Be a Machine* "[A] painfully intense, courageous and gripping account of [Fanning's] journey to the underworld of madness and back. This is a brave and instructive book." Irish Times "This is an extraordinary memoir about how it feels to be depressed, delusional, desperate" The Observer "Incredibly important" Emilie Pine, author of *Notes to Self* "A ratcheting pace, a

tight first-person immediacy, and utterly staggering to be a passenger over its entire warped course An indelible, ground-shaking account" Hilary A White, Irish Independent, Memoir of the Year, Best Reads of 2018 "A spellbinding memoir that should prove both moving and hopefully cathartic for the reader." RTE Culture "Told in tight and immediate first-person, and imbued with a startling momentum that ratchets unnervingly, Fanning's publishing debut is a significant achievement and should be a talking point in publishing this year." Irish Independent "Extraordinary. An account of mental illness, grief, delusions, homelessness, a fractured family relationship and all while trying to recover and create. Superb writing on a frequently difficult subject." Sinéad Gleeson "Fanning's debut book lays it on the line in a deeply personal and compelling chronicle of his descent into depression and his way back out." RTE Guide "Wonderful" Joseph O'Connor, Irish Times Books of the Year "Unsparingly direct, searing and honest It is gripping to read and must have been exhausting to live" Medical Independent "One of the most gripping and revealing memoirs I've read in a long time. A controlled and artful exploration of absolute loss of control, an unsettling and at times very moving reconstruction of a period of serious mental illness, Mind on Fire is a beautiful book about a terrifying thing." Mark O'Connell, Irish Times Books of the Year "Gripping" Sinéad Gleeson, Irish Times Books of the Year "Shocking" Liz Nugent, Irish Times Books of the Year "Poignant, beautifully detailed memoir" Sarah Gilmartin, Irish Times, Best debuts of 2018 "Brave and illuminating" Sunday Business Post "This is the type of account that not only grips you wholesale as the

pages flitter past, it also changes your very perception of psychology" Hilary A White, Sunday Independent Memoir of the Year

Tell Me About Your Day Today

A look at hallucination reveals the cartography of the hallucinatory world through case histories that feature a pool shark, a nurse who sees swastikas on her patients' bedsheets as the result of sleep deprivation, and others. 25,000 first printing. Tour.

My Brain on Fire

NOW A MAJOR MOTION PICTURE STARRING CHLOË GRACE MORETZ An award-winning memoir and instant New York Times bestseller that goes far beyond its riveting medical mystery, *Brain on Fire* is the powerful account of one woman's struggle to recapture her identity. When twenty-four-year-old Susannah Cahalan woke up alone in a hospital room, strapped to her bed and unable to move or speak, she had no memory of how she'd gotten there. Days earlier, she had been on the threshold of a new, adult life: at the beginning of her first serious relationship and a promising career at a major New York newspaper. Now she was labeled violent, psychotic, a flight risk. What happened? In a swift and breathtaking

narrative, Susannah tells the astonishing true story of her descent into madness, her family's inspiring faith in her, and the lifesaving diagnosis that nearly didn't happen. "A fascinating look at the disease that could have cost this vibrant, vital young woman her life" (People), *Brain on Fire* is an unforgettable exploration of memory and identity, faith and love, and a profoundly compelling tale of survival and perseverance that is destined to become a classic.

Basketball Junkie

"Make [your] characters want something right away—even if it's only a glass of water. Characters paralyzed by the meaninglessness of modern life still have to drink water from time to time." —Kurt Vonnegut "The cat sat on the mat' is not the beginning of a story, but 'the cat sat on the dog's mat' is." —John Le Carré Nothing is more inspiring for a beginning writer than listening to masters of the craft talk about the writing life. But if you can't get Vladimir Nabokov, Virginia Woolf, and Gabriel García Márquez together at the Algonquin, The Modern Library Writer's Workshop gives you the next best thing. Stephen Koch, former chair of Columbia University's graduate creative writing program, presents a unique guide to the craft of fiction. Along with his own lucid observations and commonsense techniques, he weaves together wisdom, advice, and inspiring commentary from some of our greatest writers. Taking you from the moment of inspiration (keep a notebook with you at all times), to writing a first draft (do it quickly! you can

always revise later), to figuring out a plot (plot always serves the story, not vice versa), Koch is a benevolent mentor, glad to dispense sound advice when you need it most. The Modern Library Writer's Workshop belongs on every writer's shelf, to be picked up and pored over for those moments when the muse needs a little help finding her way. From the Trade Paperback edition.

Vaninka (Celebrated Crimes Series)

Shares the author's personal experiences with anxiety, describing its painful coherence and absurdities while sharing the stories of other sufferers to illustrate anxiety's intellectual history and influence.

Fire in the Brain

Encephalitis is a devastating condition whose impact upon people should not be underestimated. It robs people of abilities most of us take for granted, it leaves people without their loved ones, and even in those families where the person affected survives the person they once knew can be dramatically changed. Life After Encephalitis provides a unique insight into the experiences of those affected by encephalitis, sharing the rich, insightful, and often powerful, narratives of survivors and family members. It shows how listening to patient and family

narratives can help us to understand how they make sense of what has happened to them, and also help professionals better understand and engage with them in practice. The book will also be useful for considering narratives associated with brain injuries from other causes, for example traumatic brain injury. Life After Encephalitis will appeal to a wide range of professionals working in rehabilitation settings, and also to and survivors of encephalitis, their families, and carers.

Mind on Fire

A first-year medical student describes an anatomy class during which she studied the donated body of a cadaver dubbed "Eve," an experience that profoundly influenced her subsequent studies and understanding of the human form.

Ultrasound for the Win!

This antiquarian book contains Alexandre Dumas's work "Vaninka". It was first published as part of his eight-volume series "Celebrated Crimes" (1839-40), and recounts the true story of brutal torture and execution in the city of St. Petersburg. A thrilling and authentic retelling of the notorious case, "Vaninka" is not to be missed by fans of the true-crime genre, and constitutes a must-have for collectors of Dumas's work. Alexandre Dumas (1802-1870) was a famous French writer. He is

best remembered for his exciting romantic sagas, including "The Three Musketeers" and "The Count of Monte Cristo". Despite making a great deal of money from his writing, Dumas was almost perpetually penniless thanks to his lavish lifestyle. His novels have been translated into nearly a hundred different languages, and have inspired over 200 motion pictures. Many of the earliest books, particularly those dating back to the 1900s and before, are now extremely scarce and increasingly expensive. We are republishing this antiquarian book in an affordable, modern, high-quality edition complete with a specially commissioned new biography of the author.

The Psychobiotic Revolution

'My first serious blackout marked the line between sanity and insanity. Though I would have moments of lucidity over the coming days and weeks, I would never again be the same person ' Susannah Cahalan was a happy, clever, healthy twenty-four-year old. Then one day she woke up in hospital, with no memory of what had happened or how she had got there. Within weeks, she would be transformed into someone unrecognizable, descending into a state of acute psychosis, undergoing rages and convulsions, hallucinating that her father had murdered his wife; that she could control time with her mind. Everything she had taken for granted about her life, and who she was, was wiped out. Brain on Fire is Susannah's story of her terrifying descent into madness and the desperate hunt for a diagnosis, as, after

dozens of tests and scans, baffled doctors concluded she should be confined in a psychiatric ward. It is also the story of how one brilliant man, Syria-born Dr Najjar, finally proved - using a simple pen and paper - that Susannah's psychotic behaviour was caused by a rare autoimmune disease attacking her brain. His diagnosis of this little-known condition, thought to have been the real cause of devil-possession through history, saved her life, and possibly the lives of many others. Cahalan takes readers inside this newly-discovered disease through the progress of her own harrowing journey, piecing it together using memories, journals, hospital videos and records. Written with passionate honesty and intelligence, *Brain on Fire* is a searingly personal yet universal book, which asks what happens when your identity is suddenly destroyed, and how you get it back. 'With eagle-eye precision and brutal honesty, Susannah Cahalan turns her journalistic gaze on herself as she bravely looks back on one of the most harrowing and unimaginable experiences one could ever face: the loss of mind, body and self. *Brain on Fire* is a mesmerizing story' -Mira Bartók, New York Times bestselling author of *The Memory Palace* Susannah Cahalan is a reporter on the New York Post, and the recipient of the 2010 Silurian Award of Excellence in Journalism for Feature Writing. Her writing has also appeared in the New York Times, and is frequently picked up by the Daily Mail, Gawker, Gothamist, AOL and Yahoo among other news aggregator sites.

Falling Into the Fire

My primary mission is to offer veterans as well as civilians who continue to suffer from the effects of trauma, the promise of hope from a member of the healing profession! I do this to replace the erroneous belief that currently pervades many of our mental health professionals about PTSD being a lifelong psychic injury that cannot be healed. In order to accomplish this objective, our country's healers require the tools and knowledge required to alter frozen brain circuitry that has become locked into a self-defensive mode. With this point of view in mind, those with PTSD have been led to believe that they must either ingest medications designed to contain and control their minds at the expense of their personalities or, they are required to be in some form of psychotherapy for the rest of their lives, or both of the above. A key point I'd like to make is that PTSD is a disease of the memory system. The real problem is not that the trauma happened in the first place, but the fact that the memory of the trauma can't be forgotten. Adults and children dealing with PTSD end up reliving the trauma over and over again. This includes physiological reactions to the experience as well as their associated emotions such as fear, anger and sadness. The emotional charge of the memories remains hair-trigger and intrudes into numerous activities of daily living. An amazing solution to this difficulty is RESET Therapy (Reconsolidation Enhancement by Stimulation of Emotional Triggers) which combines neuro-acoustical stimulation (sound) with patient recall of traumatic memories. The idea is to reset emotional memory circuits in the brain to pre-trauma levels. This occurs during a process

designed to interfere with a targeted memory being restored repeatedly after it is selectively lit up in the emotional part of the brain through the patient's intentional focus. Methods like RESET Therapy are giving many trauma impaired individuals hope that PTSD doesn't have to permanently ruin their lives. It's increasingly clear that brain-based methods and non-invasive tools are the future of medicine. I am committed to fully researching this approach and to train and certify as many healers that I can share this critically important knowledge with.

In Shock

An instant New York Times bestseller “A haunting, harrowing testament to survival.” — People Magazine “An addictive chronicle of a polygamist community.” — New York Magazine “Unforgettable” — Entertainment Weekly The thirty-ninth of her father’s forty-two children, Ruth Wariner grew up in polygamist family on a farm in rural Mexico. In *The Sound of Gravel*, she offers an unforgettable portrait of the violence that threatened her community, her family’s fierce sense of loyalty, and her own unshakeable belief in the possibility of a better life. An intimate, gripping tale of triumph and courage, *The Sound of Gravel* is a heart-stopping true story.

Sam Houston and the Alamo Avengers

How we raise young children is one of today's most highly personalized and sharply politicized issues, in part because each of us can claim some level of "expertise." The debate has intensified as discoveries about our development-in the womb and in the first months and years-have reached the popular media. How can we use our burgeoning knowledge to assure the well-being of all young children, for their own sake as well as for the sake of our nation? Drawing from new findings, this book presents important conclusions about nature-versus-nurture, the impact of being born into a working family, the effect of politics on programs for children, the costs and benefits of intervention, and other issues. The committee issues a series of challenges to decision makers regarding the quality of child care, issues of racial and ethnic diversity, the integration of children's cognitive and emotional development, and more. Authoritative yet accessible, *From Neurons to Neighborhoods* presents the evidence about "brain wiring" and how kids learn to speak, think, and regulate their behavior. It examines the effect of the climate-family, child care, community-within which the child grows.
