Flash for the Real World

Babel, Alan Burns's fourth critically acclaimed novel, contains all the hallmarks of the aleatoric style he helped to define--shot through with seemingly random newspaper headlines, poems, snatches of conversation and anecdote, which both heighten and undermine meaning, and characterized by extreme contrasts of mood and style and startling surrealist juxtapositions of images and ideas.By turns comic and tragic, tender and brutal, religious and blasphemous, the narrative rockets from London to the United States to Vietnam to interstellar space, familiar events are constantly fragmented and reset into new patterns, and ultimately Babel becomes a cautionary tale about the tragedy arising from attempting to build Utopia.

Field Manual for Powerline Workers provides linemen with instant access to information needed to complete daily tasks and respond effectively to emergency service calls. More than a directory of rules and regulations, the author outlines safety precautions and offers procedural guidelines to minimize the risk of field injuries. Among the topics covered in detail are: high- and low-voltage troubleshooting procedures, stringing procedures, rigging procedures, truck operation, and boom operation. Specific guidelines for live line work - placing grounding; controlling ground and air traffic; climbing, trenching, and blasting; contending with lightning and pole fires; and working alone - are also addressed thoroughly. Cybercrime Case Presentation is a "first look" excerpt from Brett Shavers' new Syngress book, *Placing the Suspect Behind the Keyboard*. Case presentation requires the skills of a good forensic examiner and great public speaker in order to convey enough information to an audience for the audience to place the suspect behind the keyboard. Using a variety of visual aids, demonstrative methods, and analogies, investigators can effectively create an environment where the audience fully understands complex technical information and activity in a chronological fashion, as if they observed the case as it happened.

Langston Holiday lives with his no-nonsense mother in the gritty public housing projects of Poindexter Village, better known as "The Vil," after his father abandons them. Without any assistance, his mother is determined to make a man out of Langston—and she's doing a pretty good job. By the end of his senior year, Langston is one of the best high-school basketball players in the nation. That's when he makes the biggest decision of his life: to forgo college and enter the professional ranks. When word hits the streets about Langston's success, his newfound wealth stirs up plenty of envy in the projects, sparking a wave of unthinkable drama and crime. He's being relentlessly pursued by Toy Daniels, a has-been athlete who's determined to sign Langston to his newly formed sports agency. Langston's best friend, Jalen, becomes involved in shady dealings with people who are known for nothing but trouble, and his girlfriend, Tori, is quickly becoming fed up with Langston's wandering ways. Suddenly, Langston doesn't know who he can trust. This gripping novel from bestselling author Franklin White realistically depicts the pitfalls of basketball stardom, when large amounts of money fall into the hands of people who've never known anything but poverty and struggle.

"A marvelous and insightful review of the creationism/evolution controversy by an individual who has contributed immeasurably to the public understanding of science."—Lee Hood, author of *The Code of Codes: Scientific and Social Issues in the Human Genome Project* "I know of no book that explains the evolution/creation controversy in such a comprehensive manner, and yet in a style that will be understood by high school students. It demarcates those areas of thought that belong to faith-supported religion on the one hand, and reason-supported science on the other without denigrating either."—Richard E. Dickerson, UCLA "There are few scientists as knowledgeable and clear about how science works, and as thoughtful about the creation and evolution controversy as John A. Moore. A product of Moore's wisdom and his over 60 years experience as a brilliant and productive scholar, *From Genesis to Genetics* will bring understanding to both citizens and scientists who are grappling with the contentious issues of science and religion, evolution and creationism."—Eugenie C. Scott, Executive Director, National Center for Science Education

This book is the admirable result of ten years' experience in organizing and teaching courses in biological reaction engineering. It gives engineers and scientists the information they need to analyze the behavior of complex biological reactors using mathematical equations and a dynamic simulation computer language. Part I treats the fundamentals of modelling (mass balance equations, involving reaction kinetics and mass-transfer rates), making them readily understandable to those new in the field. Part II gives 45 example problems, complete with models and programs. This book is the first of its kind to include a diskette with a commercial simulation language. The diskette can be run on any DOS personal computer. Users will appreciate how the simulation runs can be interrupted for interactive parameter changes and instructive plotting.

From Guy Saville, the explosive new thriller of a world that so nearly existed Africa, 1952. More than a decade has passed since Britain's humiliation at Dunkirk brought an end to the war and the beginning of an uneasy peace with Hitler. The swastika flies from the Sahara to the Indian Ocean. Britain and a victorious Nazi Germany have divided the continent. The SS has crushed the native populations and forced them into labor. Gleaming autobahns bisect the jungle, jet fighters patrol the skies. For almost a decade an uneasy peace has ensued. Now, however, the plans of Walter Hochburg, messianic racist and architect of Nazi Africa, threaten Britain's ailing colonies. Sent to curb his ambitions is Burton Cole: a one-time assassin torn between the woman he loves and settling an old score with Hochburg. If he fails unimaginable horrors will be unleashed on the continent. No one - black or white - will be spared. But when his mission turns to disaster, Burton must flee for his life. It is a flight that will take him from the unholy ground of Kongo to SS slave camps to war-torn Angola - and finally a conspiracy that leads to the dark heart of The Afrika Reich itself.

An intranet portal project may well be the first and last project in your organisation that truly touches everyone, from the office of your CEO to the newest recruit. It may well be the most significant investment that you ever make in your people, their processes and their systems and has the power and potential to transform your organisation. However, it can be a tough project to deliver, bringing great exposure to its participants. All your customers will be only a small march away down the corridor and will all know where you live! Considering the \$1.5 billion market for intranet portal technology

worldwide, there are surprisingly few books on the topic (and those typically either very technical or very theoretical). The Intranet Portal Guide is a deliberately practical handbook for the stressed middle manager, seeking to make things happen in their organisation. The book is divided into three sections (before, during and after) and 31 chapters, addressing everything from the key issue of how to make the business case through to ongoing performance enhancement and benefit realisation. It is packed full of tools, templates, plans and processes for successful delivery - based on real life experience of implementation at two major UK companies.

The Systemic Practice of Misinterpretation of Scientific Data

In The Systemic Practice of Misinterpretation of Scientific Data, the author unfolds the ways in which researchers misinterpret their data to promote a hypothesis with the aim of attracting the attention of the scientific community. By providing examples, the author explains how flawed research findings enter and remain in scientific literature for a long time. This book gives insights not only to researchers in the sciences, but also to journal reviewers and to various governmental and private agencies that work to promote science. The message of the book is positive and clear: it is possible to identify the flaws in scientific research by scrutinizing the subject matter thoroughly, thus saving researchers around the globe time and money. It is generally believed that the scientific community is relatively free of corruption and that it adopts good scientific practices. However, flawed research findings may occur not only from human error, but also

from the intentional attempts of some researchers to promote their preconceived hypotheses. The author warns that unless certain practices in research are checked, a point will soon be reached when scientific research will not be worth the money invested in it. The book starts with some of the fundamental concepts in pharmacokinetics and the pharmacodynamics of antibiotics. Then, four related but independent topics are discussed: persisters, small colony variants, viable but non-culturable bacteria, and senescent bacteria. Each topic is divided into two sections: the first is a review of the literature; the second questions the validity of the current hypotheses and findings. In the subsequent chapters, a simpler hypothesis is offered after integration of the four topics. Finally, the impact of creating illusions in research is discussed.

Shrader-Frechette looks at current U.S. government policy regarding the nation's high-level radioactive waste both scientifically and ethically. What should be done with our nation's high-level radioactive waste, which will remain hazardous for thousands of years? This is one of the most pressing problems faced by the nuclear power industry, and current U.S. government policy is to bury "radwastes" in specially designed deep repositories. K. S. Shrader-Frechette argues that this policy is profoundly misguided on both scientific and ethical grounds. Scientifically—because we cannot trust the precision of 10,000-year predictions that promise containment of the waste. Ethically—because geological disposal ignores the rights of present and future generations to equal treatment, due process, and free informed consent. Shrader-Frechette focuses

her argument on the world's first proposed high-level radioactive waste facility at Yucca Mountain, Nevada. Analyzing a mass of technical literature, she demonstrates the weaknesses in the professional risk-assessors' arguments that claim the site is sufficiently safe for such a plan. We should postpone the question of geological disposal for at least a century and use monitored, retrievable, above-ground storage of the waste until then. Her message regarding radwaste is clear: what you can't see can hurt you.
