Guide to Single Point Moorings

The Christian Approach to Social Morality

Despite demonstrated prowess in the handling of ships and sailors, five years after receiving his commission, Jim Stavridis was planning on getting out of the Navy and going to law school. His assignments officer, a young lieutenant commander by the name of Mike Mullen (who would go on to become Chairman

of the Joint Chiefs) noticed something special in Stavridis, however, and convinced him to stay on active duty by dangling the prospect of Uncle Sam sending him to graduate school. Going ashore for a few years, Stavridis earned his MALD and PhD in international relations from the Fletcher School of Law and Diplomacy at Tufts University. The experience that taught him to look beyond the horizon and to think and act globally. Throughout his career Stavridis was anything but uniform in the way he approached his duties. An avid reader and prolific author he wrote more than 55 articles, commentaries, and book reviews in the Navy's professional journal "Proceedings" beginning when he was still a midshipman and continuing to this day. He has also written for some of the leading papers and journals in the United States, including the, New York Times, Washington Post, Atlantic Magazine, Naval War College Review, and many others His career was marked by unusually challenging assignments including command of a U.S. Navy guided missile destroyer in the early '90s; two stints as a top aide to two different Secretaries of the Navy (one a Republican and the other a Democrat); and command of an aircraft carrier battle group. Stavridis narrowly missed being killed on September 11, 2001 when an American Airlines aircraft plunged into the Pentagon not far from his office. He was subsequently put in charge of a Navy think tank, "Deep Blue," which was tasked with reimagining the service's role in a post-9/11 environment. Already selected for his first star as 9/11 unfolded, his rise through the ranks was swift - even going directly from one-star to three-star admiral without ever wearing two stars - when he was

selected to be the senior military assistant to the very demanding Secretary of Defense, Donald Rumsfeld. Surviving that crucible, he was nominated for his fourth star at the age of 50, one of the youngest persons to serve at that rank in modern history. He then became the first naval officer to lead the U.S. Southern Command - responsible for all U.S. military operations in the Caribbean and Central and South America. At the end of that assignment he was picked to be the first naval officer to serve as Supreme Allied Commander of NATO - a job first held by Dwight D. Eisenhower and then by a string of prominent generals. When he was given that assignment, the New York Times referred to Stavridis as a "renaissance Admiral," something Stavridis turned into "the accidental Admiral" given he was the first sailor to head to that command. That is where this book, "The Accidental Admiral" picks up - as Stavridis enlightens readers about securing such a position and serving as NATO's top man in uniform for four years. They were challenging years indeed. Stavridis was responsible for NATO operations in Afghanistan, its conduct of a military intervention in Libya and preparation for possible war in Syria - as well as worrying about the Balkans, cyber threats, piracy, all while cutting NATO by 30% due to budget reductions by the 28 nations of the Alliance. More than just describing the history of what happened, Stavridis shares with reader the "why" and gives insights into the personalities of those with whom he dealt, ranging from President Barack Obama; Secretary of State Hillary Clinton; Secretaries of Defense Robert Gates, Leon Panetta, and Chuck Hagel; Afghan President Hamid Karzai; Generals David Petraeus,

Stanley McChrystal, John Allen and many more. The Accidental Admiral is more than just a memoir. The book is also a very personal reflection of the burdens and benefits of leadership, and Stavridis also shares his insights on strategic communications, planning, and the convergence of threats that will confront the U.S. and its allies in the near future.

open question. Cork Oak Woodlands on the Edge provides a synthesis of the most up-to-date, scientific, and practical information on the management of cork oak woodlands and the cultural systems that depend on cork oak. In addition, Cork Oak Woodlands on the Edge offers ten site profiles written by local experts that present an in-depth vision of cork oak woodlands across a range of biophysical, historical, and cultural contexts, with sixteen pages of full-color photos that illustrate the tree, agro-silvopastoral systems, products, resident biodiversity, and more. Cork Oak Woodlands on the Edge is an important book for anyone interested in the future of cork oak woodlands, or in the management of cultural landscapes and their associated land-use systems. In a changing world full of risks and surprises, it represents an excellent example of a multidisciplinary and holistic approach to studying, managing, and restoring an ecosystem, and will serve as a guide for other studies of this kind.

The ICC/ASHRAE 700-2015 National Green Building Standard(TM) (NGBS) has been approved by the American National Standards Institute for all types of sustainable residential construction. A collaborative effort of the International Code Council, ASHRAE and the National Association of Home Builders, NGBS outlines a variety of green practices that can be incorporated into new homes and multifamily buildings, as well as hotels, dormitories and land developments. The Standard also delivers stand-alone chapters for both home remodeling and additions and renovations of multifamily buildings. The green practices address site and lot design, preparation and development; resource, energy and water efficiency;

indoor environmental quality; and operation, maintenance and building owner education. Four levels--Bronze, Silver, Gold and Emerald--enable residential professionals to integrate sustainability and high performance at a level most appropriate for their businesses and specific housing markets.

Changes for the 2015 Edition The 2015 edition incorporates changes that better align the NGBS with the I-codes, expands the application of innovative practices and builds upon years of building and certifying to NGBS. Some of the more notable updates include:

- Substantial revisions to the Energy Efficiency chapter, which now has more stringent rating levels based upon whole-house energy savings that are above the 2015 International Energy Conservation Code.
- A comprehensive update of the exterior and interior lighting provisions including common areas in multifamily building.
- Mandatory installation of carbon monoxide alarms for all buildings, regardless of level of certification or local code.
- Revamped stormwater management options that encourage low-impact development practices.
- Greater emphasis on and recognition of multi-modal transportation options including bicycle parking, pedestrian connectivity, proximity to transit and electric-vehicle charging.
- New references in the Resource Efficiency chapter for Environmental Product Declarations for both specific and industry-wide products.

This latest edition includes everything needed to design, construct or remodel any residential project to the most current sustainable and green building criteria available - all under one roof!

Fundamentals of Christian Education

This is the first volume exclusively dedicated to planning education, with a focus on India and learning from global experiences for India. Prior to the 1990s, planning education in India was largely confined to national and local economic concerns. Within a globalized scenario, such pedagogies and theories have become outmoded. With new concerns emerging in planning, new pedagogical tools and theorizations need to be developed within planning curricula to provide today's planners with the wherewithal to adapt to changing and globalizing cities and regions in India. Therefore, the eminent contributors to this volume deal exclusively and comprehensively with planning education in a globalized context. Divided into four thematic sections, this volume provides a comprehensive view of planning education in India, with focus on:

- The trajectory of planning education in India.
- The kinds of knowledge used for teaching in Indian planning schools, and whether some sort of integration of diverse knowledges is achieved.
- The ethical foundations of urban and regional planning in Indian planning schools.
- The role of international planning perspectives in providing new insights for Indian planning education.

Comprehensive and topical, this volume is of interest to academics and researchers from planning institutes, urban and regional planners and policy makers, as well as architects, social geographers and economists.

Teaching Mathematics is nothing less than a mathematical manifesto. Arising in response to a limited National Curriculum, and engaged with secondary schooling for those aged 11– 14 (Key Stage 3) in particular, this handbook for teachers will help them broaden and enrich their students' mathematical education. It avoids specifying how to teach, and focuses instead on the central principles and concepts that need to be borne in mind by all teachers and textbook authors—but which are little appreciated in the UK at present. This study is aimed at anyone who would like to think more deeply about the discipline of 'elementary mathematics', in England and Wales and anywhere else. By analysing and supplementing the current curriculum, Teaching Mathematics provides food for thought for all those involved in school mathematics, whether as aspiring teachers or as experienced professionals. It challenges us all to reflect upon what it is that makes secondary school mathematics educationally, culturally, and socially important.
