## **Deutsche Nationalbibliographie und Bibliographie des im Ausland erschienenen deutschsprachigen Schrifttums**

Der Brückenkurs Physik bereitet Studienanfänger auf das Hochschulstudium Physik vor, indem er die Grundlagen des Fachgebiets ausführlich und ohne allzu großen Rückgriff auf Mathematik vermittelt und die Theorie mit ausführlich gerechneten Beispielen auflockert. Im Verlauf der Kapitel wird darauf hingearbeitet, komplexere Zusammenhänge zu verstehen. Die Lernzielkontrolle erfolgt über Fragen und Übungsaufgaben verschiedener Schwierigkeitsgrade, deren Lösungen am Ende des Buches präsentiert werden. Die 2. Auflage mit thematischen Ergänzungen und neuen Aufgaben. Inhalt: Empfehlungen zur Verwendung dieses Buches Einige Vorbereitungen Mechanik Thermodynamik Elektrizitätslehre und Magnetismus

This book presents the results from the Uranium Mining and Hydrogeology Congress held in September 2005, in Freiberg, Germany. It addresses scientists and engineers involved in the areas of uranium mining and milling sites, clean-up measures, emissions of nuclear power plants and radioactive waste disposal, as well as political decision-makers. The topics covered are: impact on groundwater from radionuclide emission, analytical specification techniques, chemical toxicity, radioisotope plant uptake, microbiology, geochemical and reactive transport, case studies on active and abandoned uranium mines and milling sites, long-term storage of radioactive waste, passive in situ treatment techniques and risk assessment studies. The accompanying CD-ROM includes all papers in colour.

The fourth edition includes new developments, in particular a new section on the double beta decay including a discussion of the possibility of a neutrinoless decay and its implications for the standard model.

Vom Aufbruch der modernen Kunst und Literatur Anfang des 20. Jahrhunderts bis zur Postmoderne das Lexikon gibt einen umfassenden Überblick über die klassische Avantgarde und die neueren Avantgarde-Bewegungen. In rund 220 Artikeln erschließt es die Avantgarde in den einzelnen Ländern sowie die verschiedenen Gattungen und Kunstsparten, wie z. B. Architektur, Bildhauerei, Design, Film, Literatur, Malerei, Mode und Fotografie. Die Einträge reichen von Abstrakter Kunst, Bauhaus, Collage und Computerkunst, über Experimentelle Musik, Gesamtkunstwerk, Happening, Konkrete Poesie, Manifest und Neue Sachlichkeit, bis Performance, Pop-Art, Ready-made und Zufall.

In February of 2009 the author heard five of the most terrifying words in the English language, "Mr. Metzler, you have cancer." Mike was given a 50/50 chance of surviving for five years, even with being treated with chemotherapy and radiation. That diagnosis started what would become two journeys in Cancer World, a physical and psychological place unwillingly inhabited by cancer patients, their caregivers, families, and friends. The first journey was that of a patient being successfully treated for Stage 4 head and neck cancer for nine months. That journey included numerous medical appointments and scans, many visits to the Emergency Room, and one 4-day stay in the hospital after nearly dying from a reaction to his chemotherapy. His second and much longer journey has been that of a 10-year survivor who has coped with many debilitating and permanent side effects from chemotherapy and radiation treatments. It has left his body, his "Brokedown Palace," with numerous surgical scars, poorly functioning muscles, a speech disability, and a very limited choice of foods that can be eaten and swallowed safely. That last condition has led to him needing a feeding tube for the rest of his life. Most of his story is told in real time, as written in the blog he started

when treatments began in 2009 and maintained for the next nine years. Other parts of the story are told through his reflections on the many ups and downs he experienced along the way. Team Mike was the large group of family members, friends, medical professionals, fellow members of the Cancer Survivors' Network community, and even a pet cat who helped Mike through his most difficult times over the years. Its captain was his wife, Terry, who contributes a key chapter from the perspective of his primary caregiver—a viewpoint rarely expressed in the many books written about cancer today. Mike tells his story with great emotion, clarity, sometimes uncomfortable honesty, and an unfailing sense of humor. In the end, it's a story of perseverance, survival, and optimism—even when there was little to be optimistic about so many times on his journeys. Mike chooses not to dwell on the many things that cancer and its treatments have taken from his life. Rather, he is grateful for the many good things he still has in his life, and the many good things yet to come in the future.

Prior to 1933–38, more women earned doctorates in German studies at the University of Vienna than at any other German-speaking university. Starting from this observation, the author examines the institutional and academic history of the German studies program from 1848 to 1938 and links it to professional portraits of three University lecturers, Christine Touaillon (1878–1928), Marianne Thalmann

(1888–1975), and Lily Weiser (1898–1987).

Einstein's steadfast refusal to accept certain aspects of quantum theory was rooted in his insistence that physics has to be about reality. Accordingly, he once derided as "spooky action at a distance" the notion that two elementary particles far removed from each other could nonetheless influence each other's properties—a hypothetical phenomenon his fellow theorist Erwin Schrödinger termed "quantum

entanglement." In a series of ingenious experiments conducted in various locations—from a dank sewage tunnel under the Danube River to the balmy air between a pair of mountain peaks in the Canary Islands—the author and his colleagues have demonstrated the reality of such entanglement using photons, or light quanta, created by laser beams. In principle the lessons learned may be applicable in other areas, including the eventual development of quantum computers.

Sustainable Entrepreneurship stands for a business driven concept of sustainability which focusses on increasing both social as well as business value - so called Shared Value. This book shows why and how this unique concept has the potential to become the most recognised strategic management approach in our times. It aims to point out the opportunities that arise from putting sustainable entrepreneurship into practice. At the same time, this book is a wake-up call for all those companies and decision makers who underestimated Sustainable Entrepreneurship before or who are simply not aware of its greater dimension. Well structured chapters from different academic and business perspectives clearly outline how Sustainable Entrepreneurship contributes to solving the world's most challenging problems, such as Climate Change, Finance Crisis and Political Uncertainty, as well as to ensuring business success. The book provides a

framework of orientation where the journey might go: What can a successful concept of SE look like? What are the key drivers for its realisation? What is the role of business in shaping the future of our society? The book also presents best practices and provides unique learnings as well as business insights from the international Sustainable Entrepreneurship Award ([www.se-award.org](http://www.se-award.org)). The Sustainable Entrepreneurship Award (short SEA) is an award for companies today who are thinking about tomorrow by making sustainable business practices an integral part of their corporate culture. Companies that receive the SEA are being recognised for the vision they have shown in combining economic and sustainable responsibility.

String theory made understandable. Barton Zwiebach is once again faithful to his goal of making string theory accessible to undergraduates. He presents the main concepts of string theory in a concrete and physical way to develop intuition before formalism, often through simplified and illustrative examples. Complete and thorough in its coverage, this new edition now includes AdS/CFT correspondence and introduces superstrings. It is perfectly suited to introductory courses in string theory for students with a background in mathematics and physics. New sections cover strings on orbifolds, cosmic strings, moduli stabilization, and the string theory landscape. Now with almost 300 problems and exercises, with password-protected solutions for instructors at [www.cambridge.org/zwiebach](http://www.cambridge.org/zwiebach).

Fans of Chris Ferrie's Quantum Physics for Babies, ABCs of Science, and Organic Chemistry for Babies will love this introduction to evolutionary biology for babies and toddlers! Help your future genius become the smartest baby in the room! It only takes a small spark to ignite a child's mind. Written by an expert, Evolution for Babies is a colorfully simple introduction to evolutionary biology. Babies (and grownups!) will learn how organisms mutate, evolve, and survive. Co-written by Cara Florance, who has a PhD in Biochemistry and a BS in Chemistry with work experience in astrobiology and radiation decontamination. With a tongue-in-cheek approach that adults will love, this installment of the Baby University board book series is the perfect way to introduce basic concepts to even the youngest scientists. After all, it's never too early to become a scientist! If you're looking for the perfect science baby gifts, science for babies, or evolution for kids, look no further! Evolution for Babies offers fun early learning for your little scientist!
